Education

- **University of Ferrara** — Italy, FE
  Bachelor degree in Computer Science — *Sept. 2020 – Sept. 2023*

Projects

- **News App**: Data Visualization of the latest News using networking and asynchronous programming to fetch data from APIs. Implementations:
  - Using Retrofit to fetch the data from the API by Coroutines.
  - Glide for displaying images.
  - Using Dialog to change the language of the news.
- **Weather app**: Basic clone of the weather app, fetchs data from openweather API and displays them base on the user's location.
- **MyQuiz app**: Simple Flag guessing game. The app has three activities: one for login, one for playing the game and last one for the result. Implementations:
  - If the answer is correct the button will turn green otherwise red.
  - There is a progressBar to see how many questions are left.
  - Last one activities will display the results by intents.

Experience

None

Programming Skills

- **Programming**: Kotlin, Java, C, MySQL, Python, HTML & CSS
